

BACK TALK 2010 | 4TH ANNUAL SPINE SYMPOSIUM
Comprehensive Concepts in Spinal Disorders and Abnormalities

September 10 and 11, 2010

Overall Objectives

At the conclusion of this program, attendees will be able to:

- Understand the clinical algorithms to effectively diagnose and treat patients that present with back or neck pain.
- Discuss comprehensive evidence-based treatment options for the spine patient, from a non-operative and operative treatment prospective; including indications, applications and expected outcomes.
- Identify common and uncommon spinal disorders; including spinal trauma, and discuss the symptoms, diagnosis and treatment options.
- Address conditions and prevalent diagnoses that affect patients at specific life-stages. Additionally, discuss intrinsic and extrinsic factors affecting these diagnoses, as well as prevention, diagnosis and treatment of these spinal disorders.
- Highlight new and emerging technologies for the treatment of spinal disorders and abnormalities; including the indications and potential benefits.
